more excel issues

Posted by freddyc - 2012/01/19 10:46

_____

I installed the plugin and find the following problems:
i use the following code:
{aridoc engine="iframe" width="650" height="650"}images/stories/assets/tabellen/T1a_ned.xlsx{/aridoc}

The xlsx-file is not visible and i am being asked to download the file (so what normally happens when you link to an excel-file without the plugin).
So I tried it with an xls-file (excel 2003) but nothing happens: a blank 650 by 650 square is visible...

When replacing the link with an pdf-file, the plugin works fine...

I tried this on Firefox 9.

Kind regards

==

_____

Hello,

Use Google Docs or Zoho Viewer engine to embed Excel documents. It will work with "iframe" if an appropriate browser's addon is installed.

Regards,
ARI Soft
