
Tags broken when edit an article

Posted by maegras - 2012/06/08 17:14

Hi, when I write an article and embed a doc for the first time it works without problems.

If I try to edit the article, plugin tags disappear and I find other strings instead. If i save doc is no more embedded.

String on save

```
{aridoc width="100%" height="450px"}images/Curricula/CV - Marco Rofei.pdf{/aridoc}
```

String on edit

"

Joomla 2.5.X

JCE or TityMCE is the same

Hello,

Could you provide a link to a page where we can see the problem and a temporary access to your J! backend by email so we can investigate an issue?

Regards,
ARI Soft

I have to upload a new version of plugin?

I tried on test website and issue is still there. Here I'm editing an article from frontend.

Ok, now it works when editing an article from frontend.

If I try to use aridoc in Community Builder field (front side editing) issue is still there, but I don't know if it is related to your code or to CB code :)

Could you provide exact steps how to reproduce the problem. What we should open and edit in community profile? You can send it by email.

Regards,
ARI Soft

I made a video to describe exact steps.

You can find it at <http://youtu.be/nmY1lxT3s3s>

There is still the empty space between the document body and the google viewer navigation bar but now tags works also when I try to edit profile.

Thanks :)
