Problem with pdf viewer
Posted by cost22 - 2012/07/22 16:59

Hello,
First of all you have done great work with this plugin, which is really usefull!
My problem is that when i use
{aridoc engine="zoho" width="700" height="400"} http://download.guardian.co.uk/g24/Sport.pdf {/aridoc} OR
{aridoc engine="google" width="700" height="400"} http://download.guardian.co.uk/g24/Sport.pdf {/aridoc}
I can't see the pdf.The first time I used zoho it appeared, but from then I can't use either google or zoho viewer to embed the pdf files that are on the internet. Why is this happening?

When I use code for the website or an article {aridoc engine="iframe" width="500" height="400"}http://www.sports.com {/aridoc}
{aridoc engine="article" width="500" height="400" id="2"}{/aridoc}

everything work fine.Why is this happening?

Hello,

Provide a link to a page where we can see the problem.

Regards,
ARI Soft

I still have my joomla site offline because of building it and cannot make it online now.
The articles are from a URL on the Internet(not in a local location), the other 'aricode' for the website and the articles are working.
Any ideas why this might be not showing my pdfs?

The codes which you provided work fine on our test server. We can investigate the problem if you provide a link to a page where we can see it.

Sorry, but we don't provide components for .NET. We offer Joomla! extensions.

Regards,
ARI Soft

This is not solution for Joomla!. This is solution for ASP.NET applications so we deleted these posts.
