
Problems on localhost

Posted by MarcoH - 2012/08/06 10:40

Hello,

i have Joomla 2.5.5 on a localhost and use the following code to publish the document:
{aridoc engine="google" width="600" height="450"}documents/06 Juni.xls{/aridoc}

Is it generally possible to use the googleengine from a localhost? Internetconnection is available.

Marco

Hello,

Your site should be available trough the Internet. If you use "localhost" domain, the plugin will not work because Google service should have ability to download your document.

Thank you very much!

I have it open from the internet and it works fine!
