
broken template showing an google doc excel

Posted by gomez - 2013/03/27 14:45

When insert this code inside an article in joomla 1.5, trying to show a public google doc excel :

```
{aridoc engine="iframe" width="750" height="600"}https://docs.google.com/spreadsheet/ccc?key=0AuzA1St7-sPRdGdhakJEcEZlcWZlcHRqU3Z5dm9VZUE&usp=sharing{/aridoc}
```

it broke the article in the front end, showing the google excel file outside the front end template, and again, in the article

I put a div before and after, but is not working
I trying using engine="google" but didnt work
I use JCE editor

what is the problem and the solution?
thankss

Hello,

If you want to show an Excel file, use "google" engine. If something doesn't work, provide a link to a page where we can see the problem.

the link is:

http://www.escuelagoleta.org.ar/index.php?option=com_content&view=article&id=450&Itemid=304&lang=es

if I use engine= google, the result is that only the source code of the file is shown

I think the problem is that the plugin appears in the header but with a div. This is the source code of the page:

...

....
