Get this message:

"Forbidden

You do not have permission to access this document."

I guess it's about file-permissions, can you give me some advice on what/ which files to chec. I got it all running OK on my lokal XAMPP. But problem on hosted webserver.

Hello,

It seems this is a problem with configuration of web server. Probably it has a limit for request or other limitation. Contact hosting support so they check it.
