EPS extension don\'t show, donwload instead!

Posted by XaRz - 2013/05/27 18:40

Hello,

I've installed the last version for Joomla 3.0 and I'm trying to show an eps file from an article with the command:

{aridoc engine="iframe" width="420" height="592"}documents/blauet.eps{/aridoc}

Tried with iframe and google engine and with this extension (EPS) chrome is donwloading the file instead of showing it.

I've tried with PDF extension and works right. Is any known bug?

Regards!

PS: I can't send you the link...I'm on MAMP,

Hello,

It is not possible to show EPS files via "iframe" engine. Only "google" engine can be used for it. If it doesn't show your file, probably unsupported format by Google Docs is used.

With google engine don't work either.

I've uploaded to gdocs and it show without problems. It's really a pitty.. :(

Thanks anyway.

Ok, I've tested it and it's working now. Was not working because I was in MAMP environtment.

However, I'll choose iframe engine..because google docs is not as fast and smoth as an iframe. I have another question but I'll open a new threat for audience convenience.

This is solved!
