The embeded document is not resizing
Posted by mike88 - 2013/07/14 20:53

_____

Hi,

I am using Joomla 3.

Whenever I put in my code as the guide says

{aridoc engine="google" width="600" height="300"}PATH_TO_DOCUMENT{/aridoc}

with my own path of course, the document does show but the width and height no matter what I put in there is the same default tiny box.

 :dry:

Why is this?

Thanks

_____

Hello,

Where we can see the problem?

Regards,
ARI Soft

_____

Hi,

The test article on the home page here...

http://totalfootballmanager.co.uk/

And same thing happens again here...

http://totalfootballmanager.co.uk/index.php/england/premier-league/arsenal

_____

It seems you use incorrect plugin code. Switch your WYSIWYG editor to plain text mode re-check plugin code.

_____

I went into global configuration and changed editor to none. Then went to the article, re-entered the code, but still no, did not work.

_____

You can see that HTML code is rendered incorrectly if open HTML source of the page. It can be a problem with a 3rd party extension or WYSIWYG editor. We can investigate the problem in more details if you provide a temporary access to your J! backend by email.

_____

Your PHP configuration is not compatible with Joomla! 3.x. Magic quotes should be disabled for Joomla! 3, you can read about here on official Joomla! site (see "Requirements for Joomla 3.x" section). "Magic Quotes GPC" parameter is enabled on your site so Joomla! works incorrectly. For example it saves " as \" (added additional \ symbol). It occurs not only with "ARI Docs Viewer" plugin code, it occurs with any content (for example in articles content) which contains " character.

Disable "Magic Quotes GPC" parameter and everything will work fine.

_____

Out of interest, if I installed Joomla 2.5 would AriDocs work with it or would it still require a better php version?
