\"Apologies. There\'s no preview available\"

_____

I've tried all three options available: internal doc, external doc and a site where I know there's a PDF that can be accessed, with no luck. Plug in is enabled. Google engine selected. I would like to show a PDF file on my site. Also I would like to show ppxt.

Any ideas? Thank you.

Hello,

What plugin code do you use?

I used all three you listed in your documentation:
Esto permite ver el documento, en formato PDF, de las funciones del SEMAPI DSPLogger Expert 400.

Switch your WYSIWYG editor to plain text mode and check plugin code. It seems the editor adds extra HTML code.

PS: We can check it if you provide a temporary access to your J! backend by email.
