Viewer doesn\'t work with .ppt file?
Posted by sholloway - 2015/03/20 11:00
_____

I have used the plugin tags as shown in the help file to show a .ppt file:{aridoc engine="google" }images/vaillant.ppt{/aridoc}. The code is added straight the the html editor, so no extraneous tags.

I get an error as shown here - http://www.4wardheating.co.uk/index.php/systems/vaillant

Any ideas?

Thanks.

Hello,

It seems this version of PowerPoint is not supported by Google Docs.

Regards,
ARI Soft

_____

Just a quick note on:
.ppt
.pptx
.odp
.sxi
After trying .ppt and convert a .pptx to both .odp and .sxi I cannot get the google engine within the plugin to render either.

They do however render in google docs.

What I did do though was to convert from presentation to .pdf and they rendered fine.

I use OpenOffice not MS Office or Libre.

I would say that this is a great plugin.
The only other file extension, apart from .pdf, is .docx that I have rendered so far. Ihave not tried any others, other than listed here.
