
ARI FancyBox to integrate 3rd party page

Posted by Laurent Zotto - 2016/09/01 10:00

Hello

I want to show parts of a foreign web page on my own web page.

I think I can use ARI DocViewer for this.

Now I want to add only a portion of a page, i.e.:

....

Is this possible and how can I do this?

Here is what I tried

```
{aridoc engine="iframe"}http://www.fltt.lu/les-clubs.html?club=53&season=15-16#tab_rankings{/aridoc}
```

The result is here:

<http://laurentzotto.familyds.org/joomla/de-de/>

but I need only a part out of the page...

Best regards

Laurent Zotto

Hello,

It is not possible to load only part of a page. The whole page is loaded into element by an URL.

Regards,

ARI Soft
