
Distorted images when using full screen view

Posted by chris711 - 2014/05/29 20:32

I have just installed Smart Book and find that A4 size images are distorted - seems like the standard settings are for US Paper sizes. I can correct the perspective for normal view by editing the CSS styles to make the viewport height an appropriate size, however when going to full screen view the image gets distorted to fit 100% width x 100% height - how can I adjust this so that the full screen view remains in proportion please?

You can see the effect at <http://www.ledaflex.com/index.php/alphaterra.html#page/3> - proportion correct at standard view - then try full screen and see the distortion.

Thanks for any help with this.

Chris

Hello,

Open template settings page and set "Book settings -> Page image scale" parameter to "Keep scale" value.

Regards,
ARI Soft
