ARI Smart Book component

Posted by oskar8212 - 2014/07/07 15:36
_____

Hello and going, greetings from Colombia.

I want to buy this component, but I have some doubts Demo.

You can enter the administrator to see editing options and I want to implement this component to cell phones and tablets but when I load the demo looks very messy.

and the html as problar desire among post videos or links to other pages leaves.
Thank you

Hello,

Thank you for your interest in the extension. Documentation for the extension is available here. It contains description of backend interface.

It is possible to use any HTML code on book pages so it is possible to embed video from popular services like YouTube, Vimeo and etc. using embed Video code or embed SWF or FLV files.

Could you explain what problem do you have on mobile devices and what browser(s) you use?

Regards,
ARI Soft

Thanks for your reply,

viewing version on the phone, looks very stretched as shown in the picture costs, and by passing the leaves almost can not see texts and other information.

Thank you

_____

Images are shown in this way because they are stretched to available space. This parameter is configured in book template settings. It is possible to show images saving aspect ratio.

_____

Where could download the Spanish language backend as I need?

Thank you

_____

The extension contains only English translation for frontend and backend parts by default, but you can read here how to create a new translation or edit existing one.

Regards,
ARI Soft
