
ARI Smart Book

Posted by oskar8212 - 2014/07/08 13:57

Hello, I'm starting to manage the component but I have a doubt, when I open the page in a cell looks very stretched and I have seen all the configuration options but I can not square it. Post a photo to your knowledge.

Watch for any response.

Hello,

Could you send a link to a page where we can see the problem?

Regards,
ARI Soft

good day, thanks for your response

I went back to download and install the component but I see the same, maybe not if you change any settings, thanks. http://www.ari-soft.com/images/fbfiles/images/Screenshot_2014_07_08_14_53_09-5da55a316d16633640e7159509eb99a8.png

Do you have a problem with the image or you mean white space on book page under the image?

Regards,
ARI Soft

Hi thanks for your reply. I have several questions.

1. Yeah, I worry about the blank, because cell phones are severely stretched. And this magazine is focused for tablets and phones.
2. When a page is in HTML I see that you have a margin and the cut goes Frontpage only leaves when in full zoom.
3. When the page is in HTML on cell phones or tablets sale very large texts or images.

As shown in the image.

Hello,

Size of a book depends on parameters which defined in template settings on "Styles settings" tab. See "Maximum width", "Minimum width" and "Book height" parameter. White space appears because images are resized saving aspect ratio ("Books settings -> Page image scale" parameter) and some disproportion width "Height" and "Maximum width" and "Minimum width" parameter.

Currently we are working on new version of the extension which will support ability to define base width and height and save aspect ratio when book is resized. It will be available within several days and resolve the problem with white space.

Regards,
ARI Soft

About question #3, you use mixed content, the left page is the image, the right page contains a HTML with some images. Images in books are responsive and due to different screens dimensions on PC monitor and mobile devices, you see images with dimensions adapted to book size. About HTML content on right page, it uses HTML table where width:350px CSS property is defined so it can not be resized less then 350px. Remove this CSS property from the table and content on this page will come responsive too.

"ARI Smart Book" v. 1.4.0 supports ability to define "Optimum page width" and "Optimum page height" parameters in template settings to keep aspect ratio and avoid white space on page when a book is resized.

It seems you use an incorrect values for "Optimum page width" and "Optimum page height" parameter in template settings. In you case set them to 1238 and 1654

Regards,
ARI Soft
