# Safari and tablet experience. Problem?

Posted by 2babooblabla - 2014/09/22 12:13

_____

Hello,

I just bought and installed your component.
However I see now that in safari there is no full screen button and that image quality when zoomed is much worse that in other browseres.
Also on a tablet you can zoom in but not move arround to see the content once zoomed.

Is there some solution to this?

I'm a bit annoyed I did not see that before as your component is quite expensive.
Apart from that I find it good and the experience in firefox is good.

thanks in advance

_____

Hello,

1. You can read here about fullscreen button.

2. What OS you use on tablet? Is it possible to see the problem anywhere?

Regards,
ARI Soft
