
Zoom function tablet and mobile devices

Posted by ecobladet - 2014/11/05 07:49

Hi!

We are having an issue with the tap zoom function. As of now it zooms in on single tap with makes navigation and scrolling on the page quite difficult.

Is there a way to modify it so that you can have double tap instead? We have not been able to find it in the code and I was wondering if you know where this function is located?

Thanks in advance and best regards!

Hello,

The extension uses jGestures library to work with mobile events. It doesn't support double tap (with one finger) event. We can send modified version of script.js file and remove handler for tap event. Users can use "+" and "-" icons to zoom-in and zoom-out content.

Regards,

Thank you! That would be great! You can send it to andreas.forsten@ecobladet.se :)

Thank you for all your help!

Hello,

We have sent the file by email.

Safari browser on iOS doesn't support fullscreen API yet. You can check it [here](#).
