# define bookid dynamically, include smartbook in vm

Posted by pgarcia - 2015/01/24 03:21

_____

Hi!
I am trying to define bookid dynamically, I woud like to "automatically" call different books depending in a variable.

I included in joomla content, using directPHP, a very simple script to test :

but the result is, "ARI Smart Book" plugin: Book with ID = "1" can not be loaded.

The book id=1 exist and I can load it if I use the static syntax.

What I need to do is to include the book in virtuemart product details and that according to the "product_id" it calls different books.

Could you please tell me how could be possible to call the smartbook "directly" in a php script without all the "content" treatement made by the plugin ?
 Or how can I define "id" dynamiclly through a PHP script included (using directPHP) in  the "product_decription" which is well processed by the plugin.

Attached printscreens.

Many thanks !!

_____

Hello,

Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft
