Book does not load

Posted by briand167g - 2015/05/02 02:41

I have created a component page for a catalogue with a category as a source but nothing loads. All I get is loading indicator. I have turned off "JCH optimise" thinking it was a conflict and I have enabled and disabled the "front end" settings in the configs menu but no change. Any ideas would be appreciated.

Regards,

Brian

Hello,

Clean browser's cache and try again please.

PS: The book shows blank pages because the articles don't contain any content.

Regards,
ARI Soft

Hi,
Thanks, it was the cache, book loads and displays as advertised.

Regards,

Brian
