
Book too small + run the book via link possible?

Posted by Lehner - 2016/01/09 00:05

Dear Support Team

I'm using the ari smart book plugin to display a book within an article.

I got the following issues:

When I load this article the book appears very small, the maximize button isnt visible, when I zoom in the maximize button becomes visible.

If I maximize it to Fullscreen its still zoomed in so I need to zoom out first.

When I flip to the next side each site is too wide to fit for this slim flyer.

When I turn back from full screen to regular size, the book size is ok now but each site is ways too wide too, as in fullscreen.

You can take a look at the site: <http://www.lehner-sicherheitstechnik.at/v2/site/index.php/leistungen#page/2>

There you need to click on "Individuelle Wartungspakete".

Below the picture there is the regarding book.

I can give you access to the admin backend if needed via pm (i hope these forum has a pm function ;-)

Another question: Is it possible to run the book from a link instead of the {plugin syntax} or the module? This would ease it alot for me to implement the book.

Thanks in advance

Best regards

Johann

Hello,

The problem occurs because the book is located in hidden area (in tab). Direct link to a book looks like:

`index.php?option=com_arismartbook&view=book&bookId=BOOKID`

Where BOOKID is ID of the book which want to show.

Hi

Thank you for the infos, that helps alot B)

I'm just using a link now and put the book into a lightbox.

One last question: There is too much white space in this book, which parameters do I have to configure to give it more height and less width, to fit this slim flyer?

Thanks in advance

Best regards

Johann

Hello,

Open "Styles settings" tab on book template settings page (see "ARI Smart Book -> Templates" page) and set "Optimum page width" parameter to 1181 value and "Optimum page height" parameter to 2480 value.

Regards,
ARI Soft

It works well now :)

Thank you for your great support.

Best regards

Johann
