
Slider worked, now only shows progress bar and sto

Posted by Internaut - 2017/08/12 18:17

Ari Layer Slider (ALS) helped me produce a good 'slider'. It worked fine.

Now, it only shows the loading progress bar, and stops at 100% and nothing else shows up. The files are there, and everything seems normal, except it won't show the slider at work. That is, the visitor does not see the slider contents after the bar stops.

What do you need from from me for assistance in recovering this?

Hello,

Could you provide a link to a page where the problem occurs? It seems an extension which uses MooTools is used in your site and it causes the conflict.

Regards,
ARI Soft

Right On! I checked and there is a 'Contact' extension that had jQuery enabled. When I disabled jQuery, Layer slider performed in it's usual great and immutable way, and the 'Contact' form worked as well... Thanks for the great support. Change Ari-Soft to Ari-Soft-Rocks :)
