## No event shows up with database source

Posted by Borox - 2016/08/26 15:15

---

Hi,

I need to create a calendar populate by items in various tables.

I created a calendar with 'Database' as source. I wrote an sql request (tested in phpmyadmin):

```
select id as EvenId, contrat_date_debut asEvenStartDate, contrat_nom as EventTitle, contrat_commentaire as EventDescription from contrats
```

contrat\_date\_debut is a date field.

I should have 2 events, one in May and one in July, but the calendar is totally empty.

Is anyone has an idea on what may cause that?

Thanks and Regards.

Nicolas
