## Show alt-text instead of image caption....

Posted by mlanders - 2009/08/13 11:29

---

Hello,

how can i handle it that i get shown the Alt-Text i use for my picture automaticly?  
I know i can give in the title manually and then it is shown.

Second question - if my title text is longer it breaks the space that the text is shown limited or it is not shown in the graphical element.

Is there a way to do not show this element that my caption is shown completely.

In the added picture you can see what i mean.

Best regards

Michael <http://www.ari-soft.com/images/fbfiles/images/limited.gif>

Hello,

Regarding your questions:

1) Do you want that it gives from file or database? You can submit feature request here for this possibility and we'll implement it in the next release.

2) The component doesn't support multi-line description.

Hello,

thank you for your fast response! Thats support!

1 - In my case it is enough if, when i give in the alt-text that it automaticly should take this text - maybe there is a possibility to add this into the general plugin-setting to choose between alt-text and a description.

2. I do not want a multiple line text - it gets automaticly broken in two lines - is there a possibility to avoid this maybe in a php definition file?

Best regards

Michael

I attached an image from joomslide - it would be great if it could be added into a future version of your plugin

1 - It's a good improvement and we'll implement it in the next release.

---

2 - Description width is based on image width, in your case your image isn't big and description can't fit in one line.
