Import questions or upload calculations

Posted by Dominic - 2017/08/08 09:16

Hi there,

I please need help, so far my help tickets go unanswered.

I bought ARI Quiz and upgraded to questionnaire reason being I have a designed questionnaire for the company. See link http://jevjobs.co.za/personality-test/

I am new to this but have been unable to get it that my personality test results fit into that of the ARI Quiz one. Currently I do manual calculation and reason for buying the plug in is so results are instantly available when submitting your test.

Can anyone help - please

Ive included the manual calculations http://www.ari-soft.com/images/fbfiles/files/the_rainbow_personality_test__005_.zip

Hello,

The plugin supports ability to create unlimited number of personalities and define description for each personality. It is possible to define for each answer how many points a user earns for each personality. At the end of quiz the plugin calculates points for each personality and the personality with high score will be selected as main personality. The plugin can also show several personalities (depends on quiz settings) and sort them by earned score.

Regards,
ARI Soft
