## Image title not used in gallery

Posted by Karav - 2017/11/30 18:55

---

Hello,

I am trying to display the title (!) of an image on the lightbox overlay.

However, the title I set is NOT used.

Instead the caption (!) is used, which is not ideal because the caption is also displayed on the page itself which I don't want.

Hello,

Could you provide a link to a page where the problem occurs?

Regards,

Sorry for the delayed answer.

Example A " a page with an image gallery (standard WP):  
<http://www.pfarre-mn.at/wallfahrtskirche/bilder/>

Here the file name is displayed ("smart title"), not the title.

Example B " a page with a single image:  
<http://www.pfarre-mn.at/wallfahrtskirche/entstehungssage/>

Here the caption is displayed, not the title.

Of course I made sure, that there actually is a title present on all images.

Settings:

☐ Get title from EXIF data = no

☐ Convert file name to title = yes

☐ Smart title = yes

When I change "Convert file name to title = no" then Example A displays nothing, Example B remains unchanged.

Update the plugin to the latest version (1.6.11). It should help to fix the problem.

Thank you, I will do and report back.

I have the "developer edition" and I put the api-key in the corresponding field, to enable auto-updating as it says in the description:

"API key is required to update the extension automatically. Copy it and insert on plugin settings page. After this the extension will check updates automatically and offer to install them."

However it seems it is not auto-updating nor do I get any message to install updates.

Am I missing something?

Perhaps some button to initiate update manually would be a useful addition for the paid versions?

Did you buy the plugin on our site or via Envato?

Since I do not know "Envato" and I used all the links originating from this website, I suppose I did not buy it via Envato. The plugin including API Key shows up in the Member Area of this website.

I manually updated the plugin to current version (1.6.11) but the problem as decribed in the OP is unchanged.

We tested plugin update on our test server and it works fine. Open "Plugins" page on WordPress backend and use "Update now" link for "ARI Fancy Lightbox" plugin.

I will test the update function when new version is available.

However, the above mentioned problem persists anyway.

Is the plugin not able to pull the actual title from the database? Seems not to work as advertised.

Images on <http://www.pfarre-mn.at/wallfahrtskirche/bilder/> page doesn't contain title so it is not shown in lightbox. Could you provide a link to a page where the problem occurs?

But yes, they do. The images do contain a title. Please see screenshot! As you can see, the title indeed is set. The problem occurs on exactly the page provided.

Screenshot:

<http://www.ari-soft.com/images/fbfiles/images/dqc1KMluMHFa.jpg>

It's a standard wordpress gallery, using shortcode as follows:

WordPress doesn't add "title" tag to images from gallery since v. 3.5. You can change this behavior if install Restore Image Title plugin.

Thank you very much. It is working as intended now. :)

It's quite annoying that WordPress devs just remove stuff without giving the user at least the option to decide for himself (without relying on plugins).

Perhaps you should integrate this plugin into yours (with some toggle to switch on/off in backend).
