
Vertical submenu position depending on window size

Posted by sass_ - 2013/04/08 01:56

Hi!

Thanks for the great module! I was able to configure it visually as it was required for me, but there is one issue left that I can't resolve myself.

When I hover on menu item that has submenu, submenu always aligns by the top of the parent menu item:
<http://www.ari-soft.com/images/fbfiles/images/align.PNG>

The problem appears if menu item that has submenu is located in the browser window bottom. If I hover on the menu item that has submenus, some submenus become hidden, and I need to scroll down the page to see them all

Is it possible if menu with submenus is located in the bottom of window, submenus would appear not where I can't see them, but a bit higher than main menu item. So it should look somehow like that:

Is it possible?

=====

Hello,

"ARI Ext Menu" doesn't support the described ability. It is supported by "ARI YUI Menu" module.

Regards,
ARI Soft

Thanks for your quick reply!

I know that it is supported by ARI YUI Menu, but ARI YUI Menu has its own limitations.

For example I can't make background color to always stay on active menu item, or the same with font color. I can't change each menu item background color e.t.c. It would be great if there would be mix of these both modules, that would take best of each module and leave cons of both modules outside.
