
linking questions to quiz

Posted by Ipolak - 2009/04/01 15:06

I just purchased AriQuiz but don't understand how you can link questions to a quiz? On my website http://www.tekstbureauklavertje4.nl/index.php?option=com_ariquiz&Itemid=81 there is a link to my quiz 'test uw taal' but when i proceed I get an error message.
In the quiz manager I don't see any possibility to link my quiz to questions. Please, can somebody give me an explanation?

Hello,

Go to Component->AR Quiz->Quizzes page on your Joomla backend. Click 'View' link in question column which you can find in data grid with quizzes. 'Question List' page will load, click 'Add' button for creating new question or click on question that editing it.

Regards,
ARI Soft

I've added a bunch of new questions to quiz but I don't link every single question, how to link them all at once? is there any function that will let me mark all questions i need and link them to the quiz?

Hello,

Currently ARI Quz don't support this possibility, but we add this feature in one of the next releases.
