
[REQUEST] Custom score on multiple questions

Posted by ameschino - 2009/05/19 08:12

Hi,

I'm using Ari Quiz on Joomla 1.5 and it's working fine.

I'm testing a couple of quiz I've made but I have a question.

Supposing that I have a 3 points question with 6 options and only three correct answers, how can I give one point if the user check 3 even if only one is correct?

I've made a configuration like this one, but it's not working like I want:

<http://img404.imageshack.us/img404/5959/immaginex.jpg>

It will be very great if there will be the possibility to have the right score without defining all variations to the answers.

We need the same feature. It's very important.
