## Request : quiz results storage management

Posted by Bambino - 2009/07/23 11:13

---

Hi Ari Team,

It could be cool if Ari-Quiz had the possibility to limit the number of results stored in the backend, and/or to have a "delete all results" option.

Currently, Ari-Quiz stores all results without any limit. It can be a problem because the database may be loaded with thousands and thousands of results if we do not take the time to delete manually those results. Deleting manually is long because we can only delete 100 results at a time.

To sum this up here is my request :

- Possibility to set limit for max number of results stored.
- adding a "delete all results" option to clear rapidly a very large number of results stored.

Thanks for reading.  
Alban

We are working on this feature and add possibility for deleting all results in the next release. We'll release new version of the component within 2 weeks.
