## Feature request

---

When adding a new question it would be great to be able to select "Only correct answers" which means someone needs to get the right answer before continuing with the next question.

We would need to have added the ability to set a number of attempts to get the right answer.

That is: a user could have a number, say "n", tries to get the answer correct. If they don't get it right after n attempts then they are able to go on to the next question and they are marked wrong for that question.

Hello,

"ARI Quiz" v. 3.3.2 supports ability to specify attempt count in question settings.

The issue of "number of attempts" seems to be supported at Quiz level under the "Access and Security" tab but I can't see that it is supported at a Question level.

The Question level does already support an "Only correct answers" setting with a value of Yes/No. But it does not support a variable number of attempts.

Apologies if I am missing something here. I'm hoping that the "number of attempts" setting can be brought to the Question level so that different Questions within a Quiz can have this setting.

This option is available in "ARI Quiz" v. 3.3.2. Check that you use the latest version of the extension:

Hi, I just updated and it works perfectly. I didn't realise there was a new version as I only installed 3.3.0 last week. Brilliant...thanks so much.  
Your help on this product is just great.
