
Request for enhancement: sorting, searching, etc.

Posted by studiocardo - 2014/05/29 17:02

Hi ARI

After taking a quick look at the existing requests, I think a lot of users are asking for essentially the same thingâ€¦

1. large window, currently when composing a quiz, the window showing the questions is too small, why not show 100 questions at one time, if the wants to do so?
2. design a module showing the cumulative average score of a given quiz so the test taker can see how his score rank compared to his peers.
3. question searchâ€¦ By ID, keywords, etc...
4. expand mass edit capability to allow users to set what kind of results to show (currently limited to onSuccess or onFail, but not beyond that).
5. Proper sorting of quizzes when invoked via menu item/category. So it sorts like Q1, Q2, Q3â€¦, Q10, Q11..., Q20..., etc. Currently it sorts like Q1, Q10, Q11,â€¦, Q2, â€¦
6. display questions in iFrame? So it makes it impossible for users to highlight and copy-&-paste the questions for offline distribution.

Thanks for your support.

regards,
SH
