## ARI Scroller errors in server logs

Posted by safariyellow - 2011/05/20 08:54

---

Hi, ARI Scroller is filling up my server error logs with the following 3 errors:

PHP Warning: fwrite(): supplied argument is not a valid stream resource in /home/httpd/vhosts/domain.com/httpdocs/administrator/components/com\_ariscroller/kernel/Cache/class.FileCache.php(18)  
: eval()'d code on line 1

PHP Warning: fclose(): supplied argument is not a valid stream resource in /home/httpd/vhosts/domain.com/httpdocs/administrator/components/com\_ariscroller/kernel/Cache/class.FileCache.php(18)  
: eval()'d code on line 1

PHP Warning:  
fopen(/home/httpd/vhosts/domain.com/httpdocs/administrator/components/com\_ariscroller/cache/files/config.php)  
: failed to open stream: Permission denied in /home/httpd/vhosts/domain.com/httpdocs/administrator/components/com\_ariscroller/kernel/Cache/class.FileCache.php(18)  
: eval()'d code on line 1

I tried to have a look at the class.FileCache.php file but it looks like its encrypted. Anyone have any ideas on how to fix this?

Cheers  
Evan

Hello,

Check that \administrator\components\com\_ariscroller\cache\files\ folder and all sub-folders have writable permissions.

Regards,  
ARI Soft
