about password secured administrator\'s area

Posted by waleed - 2008/10/29 00:31

_____

I protected my admin's area with a password and username .. now when I installed the ARI Scroller .. from the front end side the browser asked me for the username and password for the admins area for displaying the ari scroll module .. it means that no one can see this module otherwise .. I should delete the protection of the backend side ?
is there any way to fix this issue ...?

_____

Hello,

ARI Scroller uses files from back end and front end. We can fix this for you and transfer necessary files to front end.

How have you set up password and username for back end? And what's the reason (Joomla! backend it secured with username/password by default)?

Regards,
ARI Soft

Hello,

ARI Scroller 1.0.1 is available. It contains the fix for this issue. Please download it in Member Area.

Regards,
ARI Soft
