Documentation for the ARI Scroller

Posted by svaden - 2008/11/01 10:45

_____

Do you have documentation about the ARI Scroller? Specifically how to use 'CSS class name of scrolling area container', Can I change the module style? Why it doesn't scroll through all my text? (I want my module to be short, but scroll through a long section of text.)

_____

In most of my modules I can change the look of my module by supplying S1, S2, S3 etc in the field called "Module Class Suffix" but this module does not have that field. Any ideas on how to accomplish this?

_____

To scroll through the long text you should just set height and width as you need.

Aslo there is className attribute that you can set your CSS class. For example, for plugin it would be:

{ariscroller ... className="my_class"}

Module has the same attribute.

_____

If I have in CSS Class name of scrolling area container test is the css code than .moduletabletest in the template_css.css?

That does not work.

_____

Please indicate CSS class using its own name without any suffix or postfix, for example: test.

Could you please also check your email for solution.

Regards,
ARI Soft
