Hello,  
will the ARI Scroller work on Joomla 1.0 or is it for 1.5 version only?

Hello,

The extension supports Joomla! 1.0 and 1.5.

Thank you for reply!

We have purchased and install the component however the website went down (white screen) as soon as the component was activated. Your component uses own mambot and module, it seems that there is a conflict between them and other already installed components on the website. Do you have any ideas?

Check error log of web server, please, or provide temporary access to your Joomla! backend by email that we can investigate this issue.
