arijdatatable not working

_____

arijdatatable not working (I have it wrapped around a csv data table that is working perfectly)

Code here

```
{arijdatatable}
{aricsvtable file="data/csv/Ari_Mens1sts.csv" className="tablebody" sortBy="Date2" sortType="SORT_NUMERIC"}
{aricsvtablecolumns}
{aricsvtablecolumn id="Date" alias="Date" pos="1"}{/aricsvtablecolumn}
{aricsvtablecolumn id="Date2" hidden="true" alias="Date2"}{/aricsvtablecolumn}
{aricsvtablecolumn id="Match" alias="Match" pos="2"}{/aricsvtablecolumn}
{aricsvtablecolumn id="Start Time" alias="Start Time"  pos="5"}{/aricsvtablecolumn}
 {aricsvtablecolumn id="Venue" alias="Venue" pos="3"}{/aricsvtablecolumn}
{aricsvtablecolumn id="Competition" alias="Competition" pos="4"}{/aricsvtablecolumn} {/aricsvtablecolumns} {/aricsvtable}
{/arijdatatable}
```

Web site here - http://www.leinster.cc/mens/fixtures

And I'll mail you my back end log in, as I suspect a jquery conflict?

Thanks

Re:arijdatatable not working

_____

Hello,

Use "System - ARI Smart Content" plugin instead of "ARI Smart Content" Joomla! content plugin. The plugin can be downloaded here, see F.A.Q. tab. Install, enabled it and disable "ARI Smart Content" plugin. It should help.

Regards,
ARI Soft

Re:arijdatatable not working

_____

I'm having a problem with this working also. In firefox (firebug) I get the following error:

$("#jdt_4d35e2651a7d1 > table").addClass("display").dataTable is not a function

I tried to download a fresh copy of ARI smart Content, uninstalled and re-installed and still experience the same issue. I also installed Jquery UI with themes as this site does not give clear instructions on any dependencies. i.e. do I need a separate copy of Jquery and themes or are these built in to Smart Content?

All I am doing is wrapping {arijdatatable} {/arijdatatable} pair around an html table with pairs.

Any ideas please? running J1.5.22 and   ARI smart Content 1.7.5. I've checked diagnostics in component and all are correct or ticked.

I believe the offending line could be:

jQuery(document).ready(function($) { $("#jdt_4d35e2651a7d1 > table").addClass("display").dataTable({"bJQueryUI":true,"bProcessing":true,"oLanguage":{"bJQueryUI":true,"oPaginate":{"bJQueryUI":true}}}); });

_____

We will updated plugin in "ARI Smart Content" v. 2.0.0.

Regards,
ARI Soft
