## Data from RSform will not appear

Posted by regi0912 - 2011/03/26 15:48

---

Great program , I think since being new to Joomla its all new.

I am having a trouble getting data from RSforms to appear in the any table. I can see the data in a module from RSforms however I cannot get the data to load into and table of ARI.

this is what I am using an I am sure its wrong ..

```
{arijdatatable bPaginate="true"}
```

```
Agent
Carrier
AV
```

```
content1
content2
content3
```

```
{/arijdatatable}
```

the table that is working is

```
{Agent:value}{carrier:value}{AV:value}
```

Please help this is very frustrating

Hello,

Could you specify please do you want to show data from database or convert plain HTML table to "ARI JDataTable"?

Regards,  
ARI Soft

---

Just wrap table which you want to convert with {arijdatatable} and {/arijdatatable} tags. If it doesn't work, provide link to page where we can see the problem please.

---

For example if an article contains the next HTML table and you want to convert it to "ARI JDataTable":

Col 1	Col 2
-------	-------

val 1	val 2
-------	-------

val 3	val 4
-------	-------

wrap it with {arijdatatable} and {/arijdatatable} tags. It will look like:

{arijdatatable}

Col 1	Col 2
-------	-------

val 1	val 2
-------	-------

val 3	val 4
-------	-------

{/arijdatatable}

If you want to convert table in a module, it requires to modify module template and wrap table in a module with {arijdatatable} and {/arijdatatable} tags and use "System - ARI Smart Content" plugin instead of "ARI Smart Content" Joomla! content plugin. "System - ARI Smart Content" plugin can be downloaded here, see "F.A.Q." tab.

---

PS: If you wish, you can provide temporary access to your Joomla! backend by email and describe what table do you want to convert and we will help to configure the extension.

Regards,  
ARI Soft
