
Data Visualizer No-Sense

Posted by latino - 2011/04/10 01:56

Hi:

I am really sad to see the charting plugin displaying no sense charts. Lack of key parameters makes this of _limited usage_.

NO SENSE CHART

How you can explain that a difference of almost 800 of 3,000 is displayed at same point. See Votos 92 and Votos 96 of the link above.

I have already purchased the Data Pack for another domain and I plan to buy for this one but I need charts to be more versatile. For example, There should be a parameter to determine top value for axis.

I was also forced to add a '0' to the (thousands) at last data point because the chart was displaying completely wrongly. This one seems as a bug.

I hope this could be addressed soon.

Thanks!

Specifically...

Why 92 and 96 data point for PNP and PPD are displayed identically when there is HUGE difference?

:(

Hello,

Sorry, but we can open provided link, 404 HTTP error page is shown.

BTW, could you provide plugin code which you use?

Regards,
ARI Soft

Hi

please check again.

The code is this one:

```
{arijdatavisualizer tableId="tblData" type="area" hideTable="false"} {/arijdatavisualizer}
```

If you want the data table let e know.

Thanks again!

B)

Download and re-install the plugin please. After this add the next attributes to {arijdatavisualizer} tag:

srcType="float" floatDelim=","

Code will look like:

```
{arijdatavisualizer tableId="tblData" type="area" hideTable="false" srcType="float" floatDelim=","}/{/arijdatavisualizer}
```

Regards,
ARI Soft

Hi:
Still same problem, chart shows the same although there is huge difference between data points. Have tried clearing cache no luck... Have modified table code and plugin still shows as v1.1.1.

:(

Thanks You!!

I used find and install and version 1.2.0 was properly installed. The graph could improve but now it makes sense. Will test more and report back If I find a major problem.

Thanks again!!!!!!

:)
