
Ninga Rss Feed problem blank lines

Posted by agenius - 2011/04/11 02:54

the ninja rss feed maker isn't compatible with the ARi Smart content because I guess ARi has blank lines in php. They are saying to edit the php files and remove the blank lines to make it work. Do you know about this??

What files would I need to edit of ARi Smart content. We are only using the JView tabs.

Hello,

Could you provide link to page where we can see the problem and temporary access to your Joomla! backend by email that we can investigate the issue?

Regards,
ARI Soft
