No display from sql table
Posted by aximdesign - 2009/03/16 11:10
_____

Hi,

I used a generic query from the existing joomla db to try and display something and it is not working, here is my code:

```
{arisqltable}
   {ariconnectionstring dbHost="localhost" dbUser="root" dbPass="" dbName="mesa" dbType="mysqli"}
   {arisqltablecolumns}
     {arisqltablecolumn id="ID" alias="ID" width="20%" className="idg"}
   {/arisqltablecolumns}
   {arisqltablequery}
SELECT id as ID
FROM jos_users
   {/arisqltablequery}
{/arisqltable}
```

Please help, I can not see anything

Hello,

Can you check that mysqli PHP extension enabled and you can connect with this credentials?

PS: You can skip {ariconnectionstring} if you are used current Joomla database.

Regards,
ARI Soft

Yes, the php_mysqli extension is enabled. How do I check if joomla can connect with these credentials to the db? I mean it seems pretty straight forward. The csv portion works well, but I need an external database that will have data for several sites that I plan using this extension on.

Thanks

I backed up the existing files and overwrote them with the new ones you sent. Still same thing and no logs.

Thanks

_____

No, I am running wampserver 5, php 5.2.8, mysql 5.1.30 on my workstation locally.

I finally got an error message:

Fatal error: mysqli error: in EXECUTE("
SELECT spec AS spec, value as value
FROM trupunch1000
") in D:\wamp\www\administrator\components\com_arismartcontent\kernel\DB\ADODBLite\adodb-
errorhandler.inc.php(18) : eval()'d code on line 74

Could you send me a sample database with sample code to generate a table so I can try it?

Thanks
