
GZip Compression + Smart content + com_php = Error

Posted by cveile - 2011/05/18 18:06

If GZip compression is on, smart content (all plugins) is enabled and custom php pages through com_php result in the following error:

Error 330 (net::ERR_CONTENT_DECODING_FAILED): Unknown error

However, combinations of 2 of those 3 seem to play nicely together...

Hello,

Is it possible to provide temporary access to your Joomla! backend by email and link to page where we can see the problem that we can investigate it?

Regards,
ARI Soft

Hello!

Msgs sent earlier today...The error shows itself in Chrome...IE shows a generic error....
