Filter function has slowed to a halt

Posted by grodarte - 2011/05/19 00:53

_____

Hi - I guess our data set is growing, and recently some users with slower boxes have been unable to load and display JDataTables. Our table is only 4 columns and 134 rows, from a database. The first column can have up to 128 characters and the last column as many as 512 characters. We're using:

- Joomla! 1.5.18
- ARI Smart Content 1.0.0 with JDataTables

Does this sound right?

Is there anything we can do to speed it up?

One idea: We don't need to sort or filter on the fourth (rightmost) column. Can we omit this from the sort and search/filter capability?

Thanks!

_____

Hello,

Could you provide link to page where we can see the problem?

Regards,
ARI Soft

_____

Here is the page with the problem:

http://staging.ctgt.net/cpt-codes

Here is the same page with the JDataTable javascript commented out (just in case it is something that we are doing wrong.)

http://ctgt.net/cpt-codes

Thanks!

What browser you use? It seems delay occurs in IE browser only.

Yes, it seems to be IE, especially 7 and 8. I have also seen it in Safari on an iPhone, but that is less of a concern. Most of our users are IE, so that is critical. Please let us know how we might fix it.

Also, is it possible to exclude a column from sort and search, but still display it as part of the table? (see original post above)

Thanks!

_____

Hi -

Can you please provide an update?

Thank you.

Sorry for delay. Currently it is impossible to select columns for searching. Searching can be enabled or disabled for all columns. You can submit feature request here and we will try to implement described feature in one of future release.

Regards,
ARI Soft
