jQuery with ARI Smart Content

Posted by AYahoo - 2009/04/08 10:57
_____

Hi, When I try to use the jQuery on my site, it disables all the plugins of the ARI Smart Content, why and how do I fix it?

Thank,
Asaf.

Hello,

Can you say link where we can see it? And send by email (info@ari-soft.com), please, part of your template between and tags.

Regards,
ARI Soft

We have received two same message from you from different e-mail addresses, check both mailbox, please. We sent the following message:

It happen because some of plugins yse jQuery and the component load jQuery

library too. But new including of jQuery library clearing all previous loaded jQuery plugins. You can use the following solution, add jQuery include before the following code in your template:

And set 'Needs jQuery load' option to 'No' in 'ARI JQuery Loader' plugin settings.

PS: Or you can provide access to your Joomla backend and we'll do it for you.

Regards,
ARI Soft
