# JFlexGrid - something simple I must be missing
Posted by cchelius - 2009/04/14 22:10

_____

I have successfully installed, licensed, activated, and enabled Smart Content along with the plugins.

I want to create a JFlexGrid. I have used the exact syntax below. However, all that is displayed is my syntax as text, not a JFlexGrid.

Is there something very simple I am missing? Some switch I have to turn on? I'm not a web developer, just a simple marketing guy building a website.

Thanks.

{arijflexgrid resizable="false" striped="true" blockOpacity="0.3" title="Thayer Trophy"}

_____

Hello,

Could you provide access to your Joomla backend by email info@ari-soft.com that we can investigate this issue?

Regards,
ARI Soft

_____

For those of you who might read this post, I was indeed missing something simple: I was pasting sample code into my editor as text instead of as HTML code.

As usual, Ari Soft provide fantastic support!!
