
Keeping all items in Accordion closed

Posted by prammy - 2009/04/20 22:46

Hello

I was wondering how I can set all items in the accordion to be closed. Right now the first item is always opened regardless of whether I keep alwaysOpen as false.

Hello,

It needs two parameters alwaysOpen="false" and active="false" . You could read about it here http://smart.ari-soft.com/index.php?option=com_content&view=article&id=2

alwaysOpen - Whether there must be one content element open. Allows collapsing the active section by the triggering event. Values: true, false

active - Selector for the active element. Set to false to display none at start(needs alwaysOpen="false")

Regards,
ARI Soft
