
Help with table in right module

Posted by lhollopeter - 2011/08/25 16:41

My client has several tables that look like this:

<http://www.ari-soft.com/images/fbfiles/images/legion.gif>

This table is currently in a Custom HMTL module in the right position. The table has caused issues with input and we decided to try a CSV solution.

We purchased the ARI Smart Content Data Table Pack and I am attempting to setup this table.

First of all, was the correct component purchased? Can I use an arismartcontent module and put in the {aricsvtable} code in the Content section?

Second, there are several colspan considerations here, and the {aricsvtablecolumnspan} parameter is rather cryptic.

Am I using the right tool? If so, how can I use the {aricsvtablecolumnspan} to achieve the look of the original table?

Thank you.

Hello,

Could you send your CSV file by email?

Regards,
ARI Soft

Thank you for your help in solving the column span issue. I have moved the first row title to the Module Title. I have also applied some limited styling to the th and td elements within a dedicated table class in my template css. I am now awaiting approval from my client.

Thank you for your quick response!
