
Joomla 1.7 version ?

Posted by eyupo92 - 2011/09/10 02:48

Hi. When will be the Joomla 1.7 version available ?

Thanks.

If the current smart version is bought, can it be upgraded to 1.7 later - or will it be bought again

Hello,

All extension's updates are available during a year after purchase. BTW, "ARI Smart Content" for J! 1.6+ will be ready today or tomorrow.

Regards,
ARI Soft

"ARI Smart Content" v. 1.8.0 is compatible with Joomla! 1.6 and 1.7.

Regards,
ARI Soft

I bought ARI Smart Content today as in recent events you have posted
"ARI Smart Content v. 1.8.0 is ready. New version is compatible with Joomla! 1.5, 1.6 and 1.7 and it is released under GNU GPL license."

This is deceptive! After purchasing I find that the version of ARI Smart Content I have purchased will not install under Joomla 1.6.6.

I am very disappointed. Where can I download the version which is compatible with Joomla 1.6 and 1.7?

Hello,

"ARI Smart Content" v. 1.8+ is compatible with J! 1.5, 1.6 and 1.7. Could you explain in more details what problem you have with installation?

Regards,
ARI Soft

I apologize, I did not realize that the component had to be installed manually from the joomla /tmp folder.

Please disregard my last post.

When I try to install by the extension manager, upload & install. I get a return error that the xml file cannot be found.

Probably Joomla! is configured incorrectly (for example path to temp folder if FTP layer is enabled).
