
Migrate from 1.0.15 to 1.5.10

Posted by vanka - 2009/06/11 11:53

Hi i'm using Data Table Pack and i want to migrate from joomla 1.0.15 to 1.5.10

i'll rather install new installation of joomla 1.5.10 than migrate from old one

do i need new installation files for your component or i should use old ones (with old activation codes ...)

=====

Hello,

The component is compatible with Joomla 1.5 and 1.0.x. It means that you can use it without problem on Joomla 1.5.10, but don't forget to copy database tables for the component. If you use it on the same domain, you can use old activation code because it's domain based.

Regards,
ARI Soft
