
Querie on csv (maybe by PHP)?

Posted by Kees - 2011/10/09 11:53

Hello,

I have Ari Smart Content Data Table Pack installed on a new site (still on localhost).
Now I want to publish in different articles several items from a csv. But always one item.

Example:

Product, Price, Color

A, 12, green

B, 15, blue

C, 20, yellow

From this csv I want to publish somewhere in a article only the price or the color from one article.

So I have to do a querie on the csv. I know SQL doesn't work on csv. But is it possible to do a selection on csv with other tools. By example PHP?

Kees

Hello,

Sorry, but currently the extension doesn't provide ability to load filtered data from CSV file.

Regards,

ARI Soft
