
Wrap Data Visualizer around other code?

Posted by sokrasin - 2011/10/25 13:15

Can the Data Visualizer be wrapped around any of your other products that display HTML tables from CSV files? I note that you seem to indicate that some of the CSV --> HTML table stuff can be wrapped but don't indicate that for some as well.

If this is possible then some example code as to how one might do this would be really useful. I note that you don't have an example like this. My attempts have failed. I have been able to use the CSV-->HTML Table code to display the tables and wrap code around it (ala your examples).

I'd like to have a chart driven from CSV content, not from data in embedded code. Any suggestions welcome. Thanks.

Hello,

For example you can place attach CSV file to root Joomla folder and use the next code:

```
{arijdatavisualizer type="bar" hideTable="true"}
{aricsvtable file="visualizer.csv"}
  {aricsvtablecolumns}
    {aricsvtablecolumn id="0" width="20%" className="idg" headCellTag="td" cellTag="th"}
  {/aricsvtablecolumn}
{/aricsvtablecolumns}
{/aricsvtable}
{/arijdatavisualizer}
```
