
SmartContent has brought my site down.

Posted by sclg - 2011/11/15 18:20

I have emailed about this but as it's urgent I'm posting here as well....

Bought SmartContent and installed it on my site.

It said it had installed OK but there was also an error message:

Warning: Invalid argument supplied for foreach() in

/home/sclg/public_html/sfm/libraries/joomla/database/database/mysql.php on line 368

Since then, my site is completely dead and just gives:

Fatal error: ARI: Couldnt load config. in

/home/sclg/public_html/sfm/administrator/components/com_arismartcontent/kernel/Controllers/class.ControllerBase.php
on line 28

See <http://www.kmtalk.org.uk/sfm/>

The admin backend is still working.

Any ideas???

Hello,

Check your mail please.

Regards,
ARI Soft

This is now fixed and it's only fair to say that it was my problem and nothing to do with ARISoft or the extension.

Thanks for the help guys.

Steve
